- NOTES:
1. NEW 13'x5' TOLAR BUS SHELTERS SHALL BE PROVIDED BY THE CITY AND INSTALLED BY THE CONTRACTOR. ALL BUS SHELTERS SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS.
  2. CONTRACTOR SHALL COLLECT THE SHELTERS FROM THE CITY OF TURLOCK CORP YARD, 701 WALNUT ROAD AND ASSEMBLE THE EQUIPMENT AT THE ROGER K. FALLS TRANSIT CENTER, 1418 N. GOLDEN STATE BLVD, PRIOR TO DELIVERY AND INSTALLATION.
  3. NEW SHELTERS AND EQUIPMENT SHALL BE INSTALLED IN SAME LOCATION AS THE REPLACED EXISTING EQUIPMENT. FOR NEW BUS STOP LOCATIONS (WITHOUT ANY EXISTING EQUIPMENT), CITY STAFF WILL IDENTIFY THE EXACT INSTALLATION LOCATIONS.
  4. CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVAL AND DISPOSAL OF ALL MATERIALS, THE COST OF WHICH SHALL BE INCLUDED IN THE PROPOSED COST:
    - EXISTING BENCHES AND TRASH CANS SHALL BE SALVAGED AND DELIVERED TO THE CITY OF TURLOCK CORP YARD. CONTRACTOR SHALL COORDINATE THE DELIVERY OF ITEMS WITH CITY STAFF A MINIMUM 48 HOURS PRIOR.
    - EXISTING SHELTERS AND SOLAR PANELS SHALL BE REMOVED AND PROPERLY DISPOSED OF BY THE CONTRACTOR.
  5. CONTRACTOR SHALL BE RESPONSIBLE TO PRESERVE OR REPLACE THE SURROUNDING SITE CONDITIONS AND UTILITIES. CONTRACTOR SHALL VERIFY THE LOCATIONS OF THE EXISTING UTILITIES POTENTIALLY AFFECTED BY CONSTRUCTION PRIOR TO CONSTRUCTION.
  6. INTERRUPTIONS TO CITY TRANSIT OPERATIONS SHALL BE KEPT TO A MINIMUM:
    - NO TWO ADJACENT BUS STOPS SHALL BE UNDER CONSTRUCTION AT THE SAME TIME.
    - NEW EQUIPMENT SHALL BE INSTALLED IMMEDIATELY AFTER THE EXISTING EQUIPMENT HAS BEEN REMOVED. EQUIPMENT REMOVAL AND INSTALLATION ON SEPARATE DAYS IS NOT PERMITTED.
  7. ELIMINATE TRIP HAZARDS AT THE EXISTING CONCRETE SIDEWALK AND RESIDENTIAL DRIVEWAY APPROACH NEAR THE PROPERTY BOUNDARY OF 1400 AND 1470 EAST AVENUE. CONTRACTOR SHALL SAW CUT UNEVEN CONCRETE USING A PRECISION BLADE, LEAVING A SMOOTH UNIFORM SURFACE. CONCRETE GRINDING IS NOT PERMITTED

NOTE: NO SURVEY MEASUREMENTS WERE TAKEN. CONTRACTOR SHALL BE RESPONSIBLE TO DETERMINE ALL DIMENSIONS ON THE SITE. ANY DISCREPANCY SHALL BE BROUGHT TO NOTICE OF THE ENGINEER PRIOR TO THE COMMENCEMENT OF ANY WORK.

THIS DRAWING HAS BEEN GENERATED AND IS MAINTAINED BY A CAD SYSTEM. CHANGES SHALL ONLY BE INCORPORATED AS DIRECTED BY TOLAR MANUFACTURING CO., INC.'S ENGINEERING DEPT.

## GENERAL NOTES:

1. ALL STRUCTURAL STEEL, UNLESS OTHERWISE NOTED, SHALL BE ASTM A-36, MINIMUM YIELD STRENGTH 36,000 PSI.
2. ALL ALUMINUM MEMBERS, UNLESS OTHERWISE NOTED, SHALL BE OF ALLOY 6063-T5.
3. ALL HOLES TO BE DRILLED OR PUNCHED.
4. STEEL WELDING SHALL CONFORM TO AMERICAN WELDING SOCIETY STANDARD D1-1-80.
5. ALUMINUM WELDING SHALL CONFORM TO AMERICAN WELDING SOCIETY STANDARD D1. 2-97. ELECTRODES SHALL CONFORM TO AWS/SFA 5.10 CLASS ER4043.
6. ALL WELDING TO BE DONE AT TOLAR MANUFACTURING COMPANY, INC. FACILITY.

# Design Maps Summary Report

## User-Specified Input

Report Title H-17-054 Mon July 31, 2017 00:18:57 UTC

Building Code Reference Document ASCE 7-10 Standard (which utilizes USGS hazard data available in 2008)

Site Coordinates 37.505°N, 120.85°W

Site Soil Classification Site Class D – “Stiff Soil”

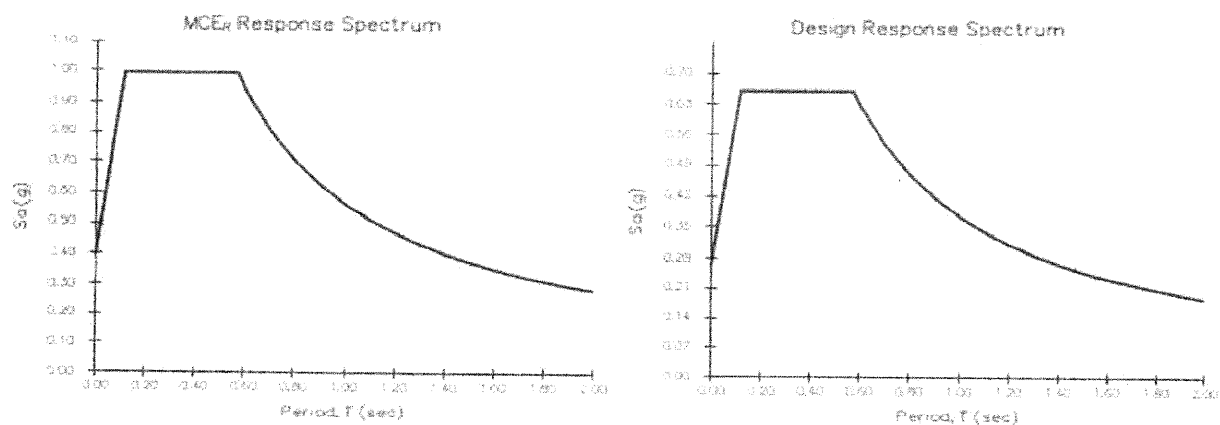

Risk Category I/II/III

## USGS-Provided Output

$S_s = 0.859 \text{ g}$	$S_{MS} = 0.994 \text{ g}$	$S_{DS} = 0.662 \text{ g}$
$S_1 = 0.322 \text{ g}$	$S_{M1} = 0.565 \text{ g}$	$S_{D1} = 0.377 \text{ g}$

For information on how the  $S_s$  and  $S_1$  values above have been calculated from probabilistic (risk-targeted) and deterministic ground motions in the direction of maximum horizontal response, please return to the application and select the “2009 NEHRP” building code reference document.

$h_o$ minimum/standard/deep hole depth		in.		1-3/8 (35)	2-1/4 (57)	3-1/4 (83)	2 (51)	2-7/8 (73)	3-7/8 (89)	2-3/4 (70)	4 (102)	5-1/4 (133)
$d_h$ wedge clearance hole in fixture		in.		5/16 (8)			7/16 (11)			9/16 (14)		
$T_{inst}$ Recommended Installation Torque	Normal weight & Light weight Concrete	Carbon Steel HDG	ft-lb (Nm)	4 (5)			20 (27)			40 (54)		
		Stainless Steel	ft-lb (Nm)	6 (8)			20 (27)			40 (54)		
	Grout Filled Block	Carbon Steel	ft-lb (Nm)	4 (5)			15 (20)			25 (34)		
$h$ min. base material thickness		in.		3 inch (76 mm) or 1.3 times embedment, whichever number is greater								
Bolt Fracture Load	Carbon Steel		2900 lb <sup>4,6</sup>			7200 lb <sup>4,6</sup>			12400 lb <sup>4</sup>			
	HDG		no offering			no offering			12400 lb <sup>4</sup>			
	Stainless steel		2900 lb <sup>4,7</sup>			7200 lb <sup>4,7</sup>			12400 lb <sup>4</sup>			

Bolt Size		in.		5/8			3/4			1		
Details		(mm)		(15.9)			(19.1)			(25.4)		
$d_{bit}$ nominal bit diameter <sup>2</sup>		in.		5/8			3/4			1		
$h_{min}/h_{nom}/h_{deep}$ minimum/standard/deep depth of embedment		in.		2-3/4 (70)	4 (102)	5-1/2 (140)	3-1/4 (83)	4-3/4 (121)	6-1/2 <sup>2</sup> (165)	4-1/2 (114)	6 (152)	9 (229)
$h_o$ minimum/standard/deep hole depth		in.		3-3/8 (86)	4-5/8 (117)	6-1/8 (156)	4 (102)	5-1/2 (140)	6-4/5 (173)	5-1/2 (140)	7 (178)	10 (254)
$d_h$ wedge clearance hole in fixture		in.		11/16 (17)			13/16 (21)			1-1/8 (29)		
$T_{inst}$ Recommended Installation Torque	Normal weight & Light weight Concrete	Carbon Steel HDG	ft-lb (Nm)	85 (115)			150 (203)			250 (339)		
		Stainless Steel	ft-lb (Nm)	85 (115)			150 (203)			235 (319)		
	Grout Filled Block	Carbon Steel	ft-lb (Nm)	65 (88)			120 (1663)			-		
$h$ min. base material thickness		in.		3 inch (76 mm) or 1.3 times embedment, whichever number is greater								
Bolt Fracture Load	Carbon Steel		19600 lb <sup>4</sup>			28700 lb <sup>4,6</sup>			$f_{ut} \geq 88 \text{ ksi}, f_y \geq 75 \text{ ksi}^5$			
	HDG		19600 lb <sup>4</sup>			28700 lb <sup>4</sup>			no offering			
	Stainless steel		21900 lb <sup>4</sup>			$f_{ut} \geq 76 \text{ ksi}, f_y \geq 64 \text{ ksi}^5$			$f_{ut} \geq 76 \text{ ksi}, f_y \geq 64 \text{ ksi}^5$			

- See Kwik Bolt 3 Product Line Table in Section 4.5.3.3 for a full list and anchor length and thread length configurations.
- Loads for Kwik Bolt 3 are applicable for both carbide drill bits (see Section 8.4.1) and matched tolerance Hilti DD-C diamond core bits in sizes ranging from 1/2 inch to 1 inch.
- The deep embedment depth for stainless steel Kwik Bolt 3 anchors is 8 inch (203 mm).
- Bolt fracture loads are determined by testing in a jig as part of product quality control. These values are not intended for design purposes.
- Bolt strength specified by minimum tensile and yield strength. Bolt fracture load not applicable.
- Bolt fracture load not applicable to carbon steel Countersunk Kwik Bolt 3. The tensile and yield strengths are,  $f_{ut} \geq 105 \text{ ksi}$  and  $f_y \geq 90 \text{ ksi}$ .
- Bolt fracture load not applicable to stainless steel Countersunk Kwik Bolt 3. The tensile and yield strengths are,  $f_{ut} \geq 90 \text{ ksi}$  and  $f_y \geq 76 \text{ ksi}$ .
- For 3/4 x 12,  $f_{ut} \geq 88 \text{ ksi}$  and  $f_y \geq 75 \text{ ksi}$ . Bolt fracture load not applicable.

## **ROOF PANEL INSTALLATION**

1. There is a film on both sides of the Lexan panel. Examine the panel and note which surface is to be faced externally. Remove film from both sides of Lexan panel. Install the edge into groove as shown in Fig 1 (Page 5). Press the panel over the top and into groove on opposite side. There should be a 1/2" gap between panels. Press down firmly so the panel contacts the roof bow at its top.
2. See Fig 2 (Page 6). Place the pressure bands with the two rubber bulb seals over the center joints. There can be a short gap at either end. Use the TEKS screws #14 x 1 1/2"(3 per bow) & #14 x 1 1/2"(2 per bow) to secure the pressure rib to the roof bow. The TEKS screw is self-drilling and tapping. A 3/8" nut driver with suitable power tool should be used.

### **PROCEDURE:**

1. Install center screw first-be sure band is centered.  
Use the #14 x 1 1/2" TEKS screw.
  2. Install next screws down; use the #14 x 1 1/2" TEKS screws.
  3. Press band down and install bottom screws, use the #14 x 1 1/2" TEKS screws.
3. See Fig 3 (Page 7). Slip the 55" long rubber J-channel over one edge of the curved 3" wide band. This band is used at each end of the roof. The edge of the band without the J-channel will be aligned to the outer edge of the last bow and on top of the 1/4" square bead. Use 5 of the TEKS screws per each of these bands.

### **PROCEDURE:**

1. Install center screw first-be sure band is centered.  
Use the #14 x 1 1/2" TEKS screw.
2. Install next screws down; use the #14 x 1 1/2" TEKS screws.
3. Press band down and install bottom screws, use the #14 x 1 1/2" TEKS screws.

BEFORE REMOVING PROTECTIVE FILMS FROM LEXAN PANEL DETERMINE WHICH SURFACE IS TO BE EXPOSED TO THE OUTSIDE

FIG 1

# **AD-BOX INSTALLATION**

AD BOXES WITHOUT ELECTRICAL GO TO STEP 3.

**NOTE:** This sign is intended to be installed in accordance with the requirements of Article 600 of the National Electrical Code and/or other applicable local codes. This includes proper grounding and bonding of the sign.

1. Open the door using the supplied tamperproof drive tip. Remove the fluorescent lamps by lifting up against the springs. Remove the bottom cover & the cover along the side below the breaker box.
2. Provide 120 volt 60 cycle (390 watts) electrical power under the ad box see pages 9, 10 & 11. The electrical power may be routed up through either shoe of ad box or a separate hole may be drilled in ad box bottom.
3. Using the Elevation drawing as a guide, place the advertising ad box at the desired location. Note: Hinges are toward the back of the shelter. Insert the shoes into the round pipe extending from bottom of the ad box. These 2 shoes and the 2 shoes at the opposite end of the shelter can be slid up or down for height adjustment. If the grade is level, the ad box shoes should extend down approximately 8" from the ad box bottom. If the grade is higher at the opposite end of the shelter the 8" dimension must be increased accordingly.
4. Support and level the ad box at the desired height. The two ad box shoes have 9/16 diameter holes. Using these holes as guides, drill 1/2" diameter holes through the shoes. Install the 1/2-13 x 4" hex head bolt and 1/2-13 locking hex nut at each shoe.
5. Mark the concrete using the holes in the two shoes to locate the eight anchors. Move the ad box to allow drilling of the concrete. Refer to anchoring Spec Sheet for anchoring instructions.

**IMPORTANT:** Place shim material under a corner of the shoe if the ground is uneven. Also place shim material under a corner of the shoe if the roof has been leveled and the shoe is not flat to sidewalk. Do not torque down the anchors so that the advertising box is distorted.

FRONT(FACING STREET)

13' SHELTER W/FLAT AD BOX

FLOOR PLAN

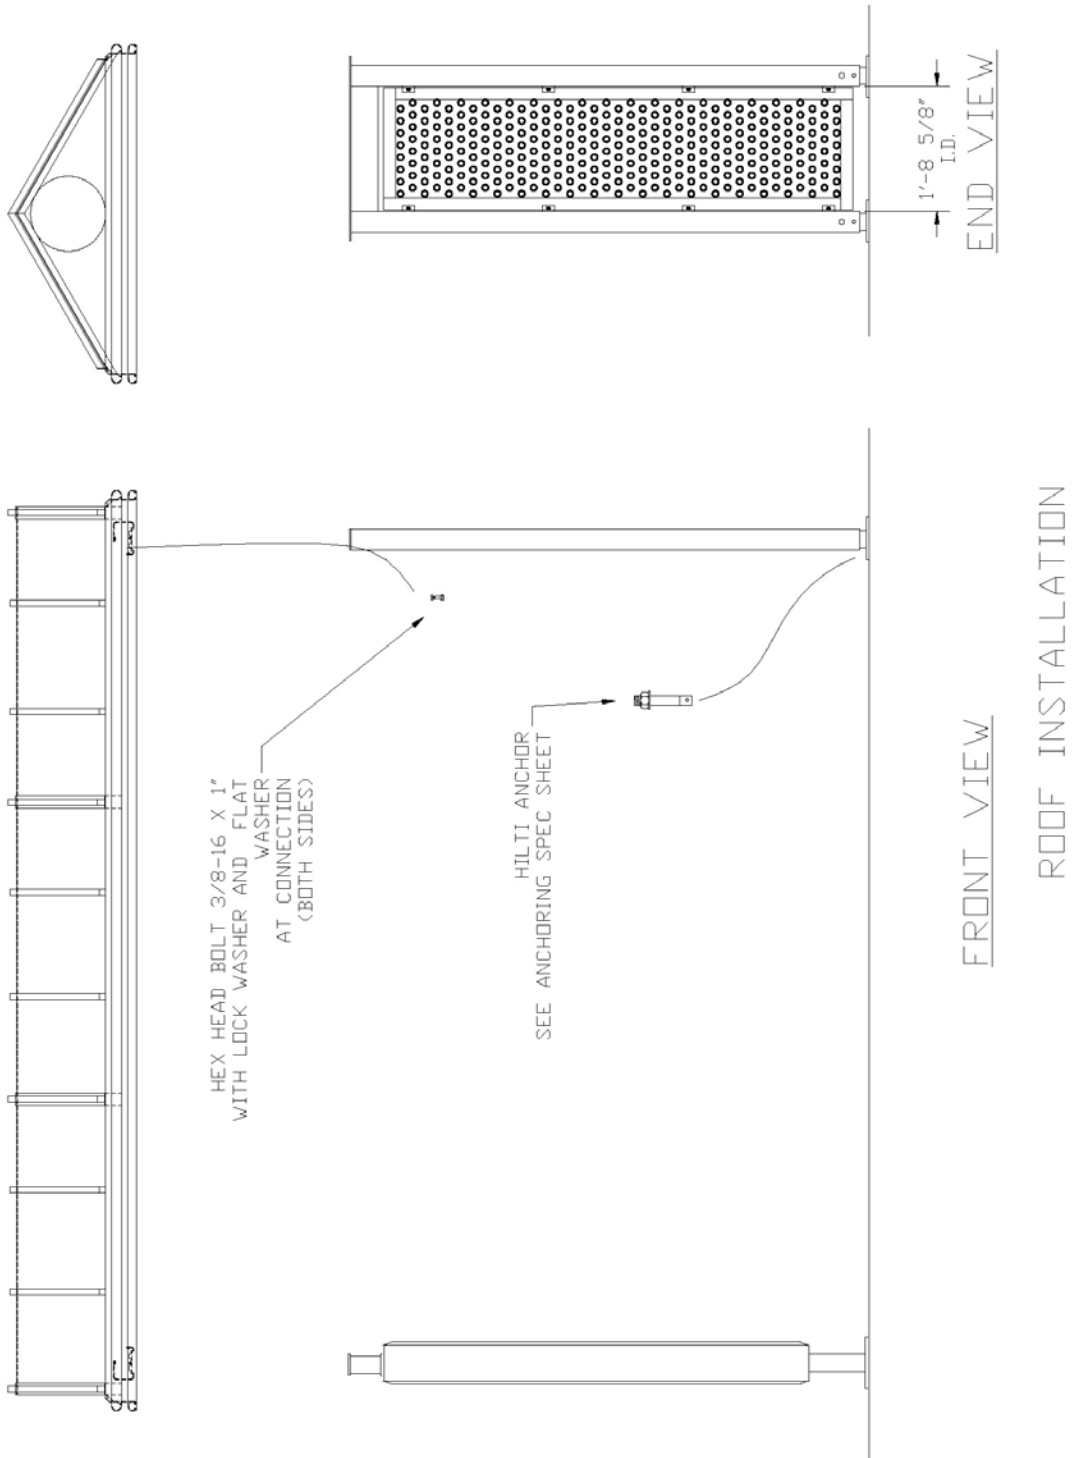

## **ROOF INSTALLATION**

**SEE PAGE 13**

1. Slide two shoes into the two support posts that are to be installed opposite the ad box.
2. Raise the roof over the ad box. Position the Dual post assembly under the crossbeam at the opposite end.
3. Insert and tighten 4 (four) 3/8 - 16 X 1 hex head bolts, 3/8 lock washers, and 3/8 flatwashers at the top of each post and the short pipe brackets of the ad box.
4. Level the roof by placing a carpenter's level on the roof's gutter on all sides then, through the 9/16" diameter holes at the bottom of each support post, drill a 1/2" diameter hole through the pipe of the shoes. It is not necessary to use the smaller 1/4" diameter holes. Some installers use a 3/4" long U-drive rivet in the small holes temporarily.
5. Install the 1/2 - 13 X 4 hex head bolt and 1/2 - 13 locking hex nut at each shoe.
6. Plumb the support posts. The dimension between the posts must be 20 5/8" inside to inside. Check this dimension at the post bottom before marking and drilling holes for the anchors. Mark hole locations and refer to anchoring specifications.

**IMPORTANT:** Place shim material under a corner of the shoe if the ground is uneven. Also place shim material under a corner of the shoe if the roof has been leveled and the shoe is not flat to sidewalk. Do not torque down the anchors so that the advertising box is distorted.

## REAR SCREEN INSTALLATION

1. See page 15 and the Elevation drawing page 3. Drop a plumb line from the rear screen insertion groove of the roof perimeter. Mark the

concrete near both ends of the roof and snap a chalk line. The rear screen support/anchor assemblies will be inserted on this line. Mark the chalk line at the intervals shown on the drawings. These marks will be the proper spacing for the support/anchor assemblies. The first support/anchor assembly at either end must be at least 4" in from end of roof.

2. Drill two (2) 1 1/4" diameter holes into the concrete on the marks with a masonry drill. These holes should be at least 8" deep and may penetrate into the grade below the concrete. This depth is required to allow clearance for the threaded adjusting rod. Clean out holes.
3. Place the bottom screen support/anchor assemblies into the holes. The top surface of the anchor itself should be flush to concrete or 1/2" below the total height of the screen is 79". Measure from inside the screen insertion groove to the screen support anchor. Rotate the threaded rod inside the anchor to adjust height. Tighten the 3/4-10 hexnut to expand and secure anchor. Slide screen up into screen insertion groove and onto bottom screen support/anchor assemblies (separate clip can be slid off). Replace clip.

## END SCREEN INSTALLATION

### NOTES:

1. SCREEN CAN BE INSTALLED OUTSIDE OF TABS ON PIPE OR INSIDE OF TABS.
2. LOOSEN THE ANCHORS AT BOTTOM TO ALLOW FITTING OF SCREEN.
3. INSTALL THE TAMPERPROOF SCREW THROUGH THE SCREEN FRAME FIRST THEN THROUGH THE TAB.

INSTALL WITH EIGHT  
SCREWS 1/4-20 X 1  
AND SELFLOCK NUT-  
USE FLATWASHER AGAINST  
SLOTTED HOLE.

## **BENCH INSTALLATION**

1. PLACE THE 8' BENCH INSIDE THE SHELTER. IT SHOULD BE PLACED TOWARD ONE END OF THE SHELTER TO COMPLY WITH ADA STANDARDS.
2. MARK THE CONCRETE AT EACH OF THE MOUNTING PADS AND WITH A 1/2" DIAMETER MASONRY DRILL, MAKE THE HOLES IN THE CONCRETE FOR THE BENCH
3. PLACE THE 1/2" DIAMETER ANCHORS INTO THE HOLES. SECURE THE BENCHES TO THE ANCHORS.

## BENCH INSTALLATION

## TRASH RECEPTACLE INSTALLATION

## **MAP CASE INSTALLATION**

- 1. Remove the side extrusion of the map case by removing the 2 tamperproof screws. Slide out the glass.**
- 2. Place the map case and support up against the flat bar frame of the end screen or against the rear perforated panel. Either use the available holes or back-drill holes using the holes in the map case. These holes should be 5/16" diameter.**
- 3. Insert the 4 machine screws from inside the map case and through the flat bar frame. Secure with the hex nuts 1/4-20 nylock.**
- 4. Slide poster (if available) and glass into map case. Replace the tamperproof machine screws.**

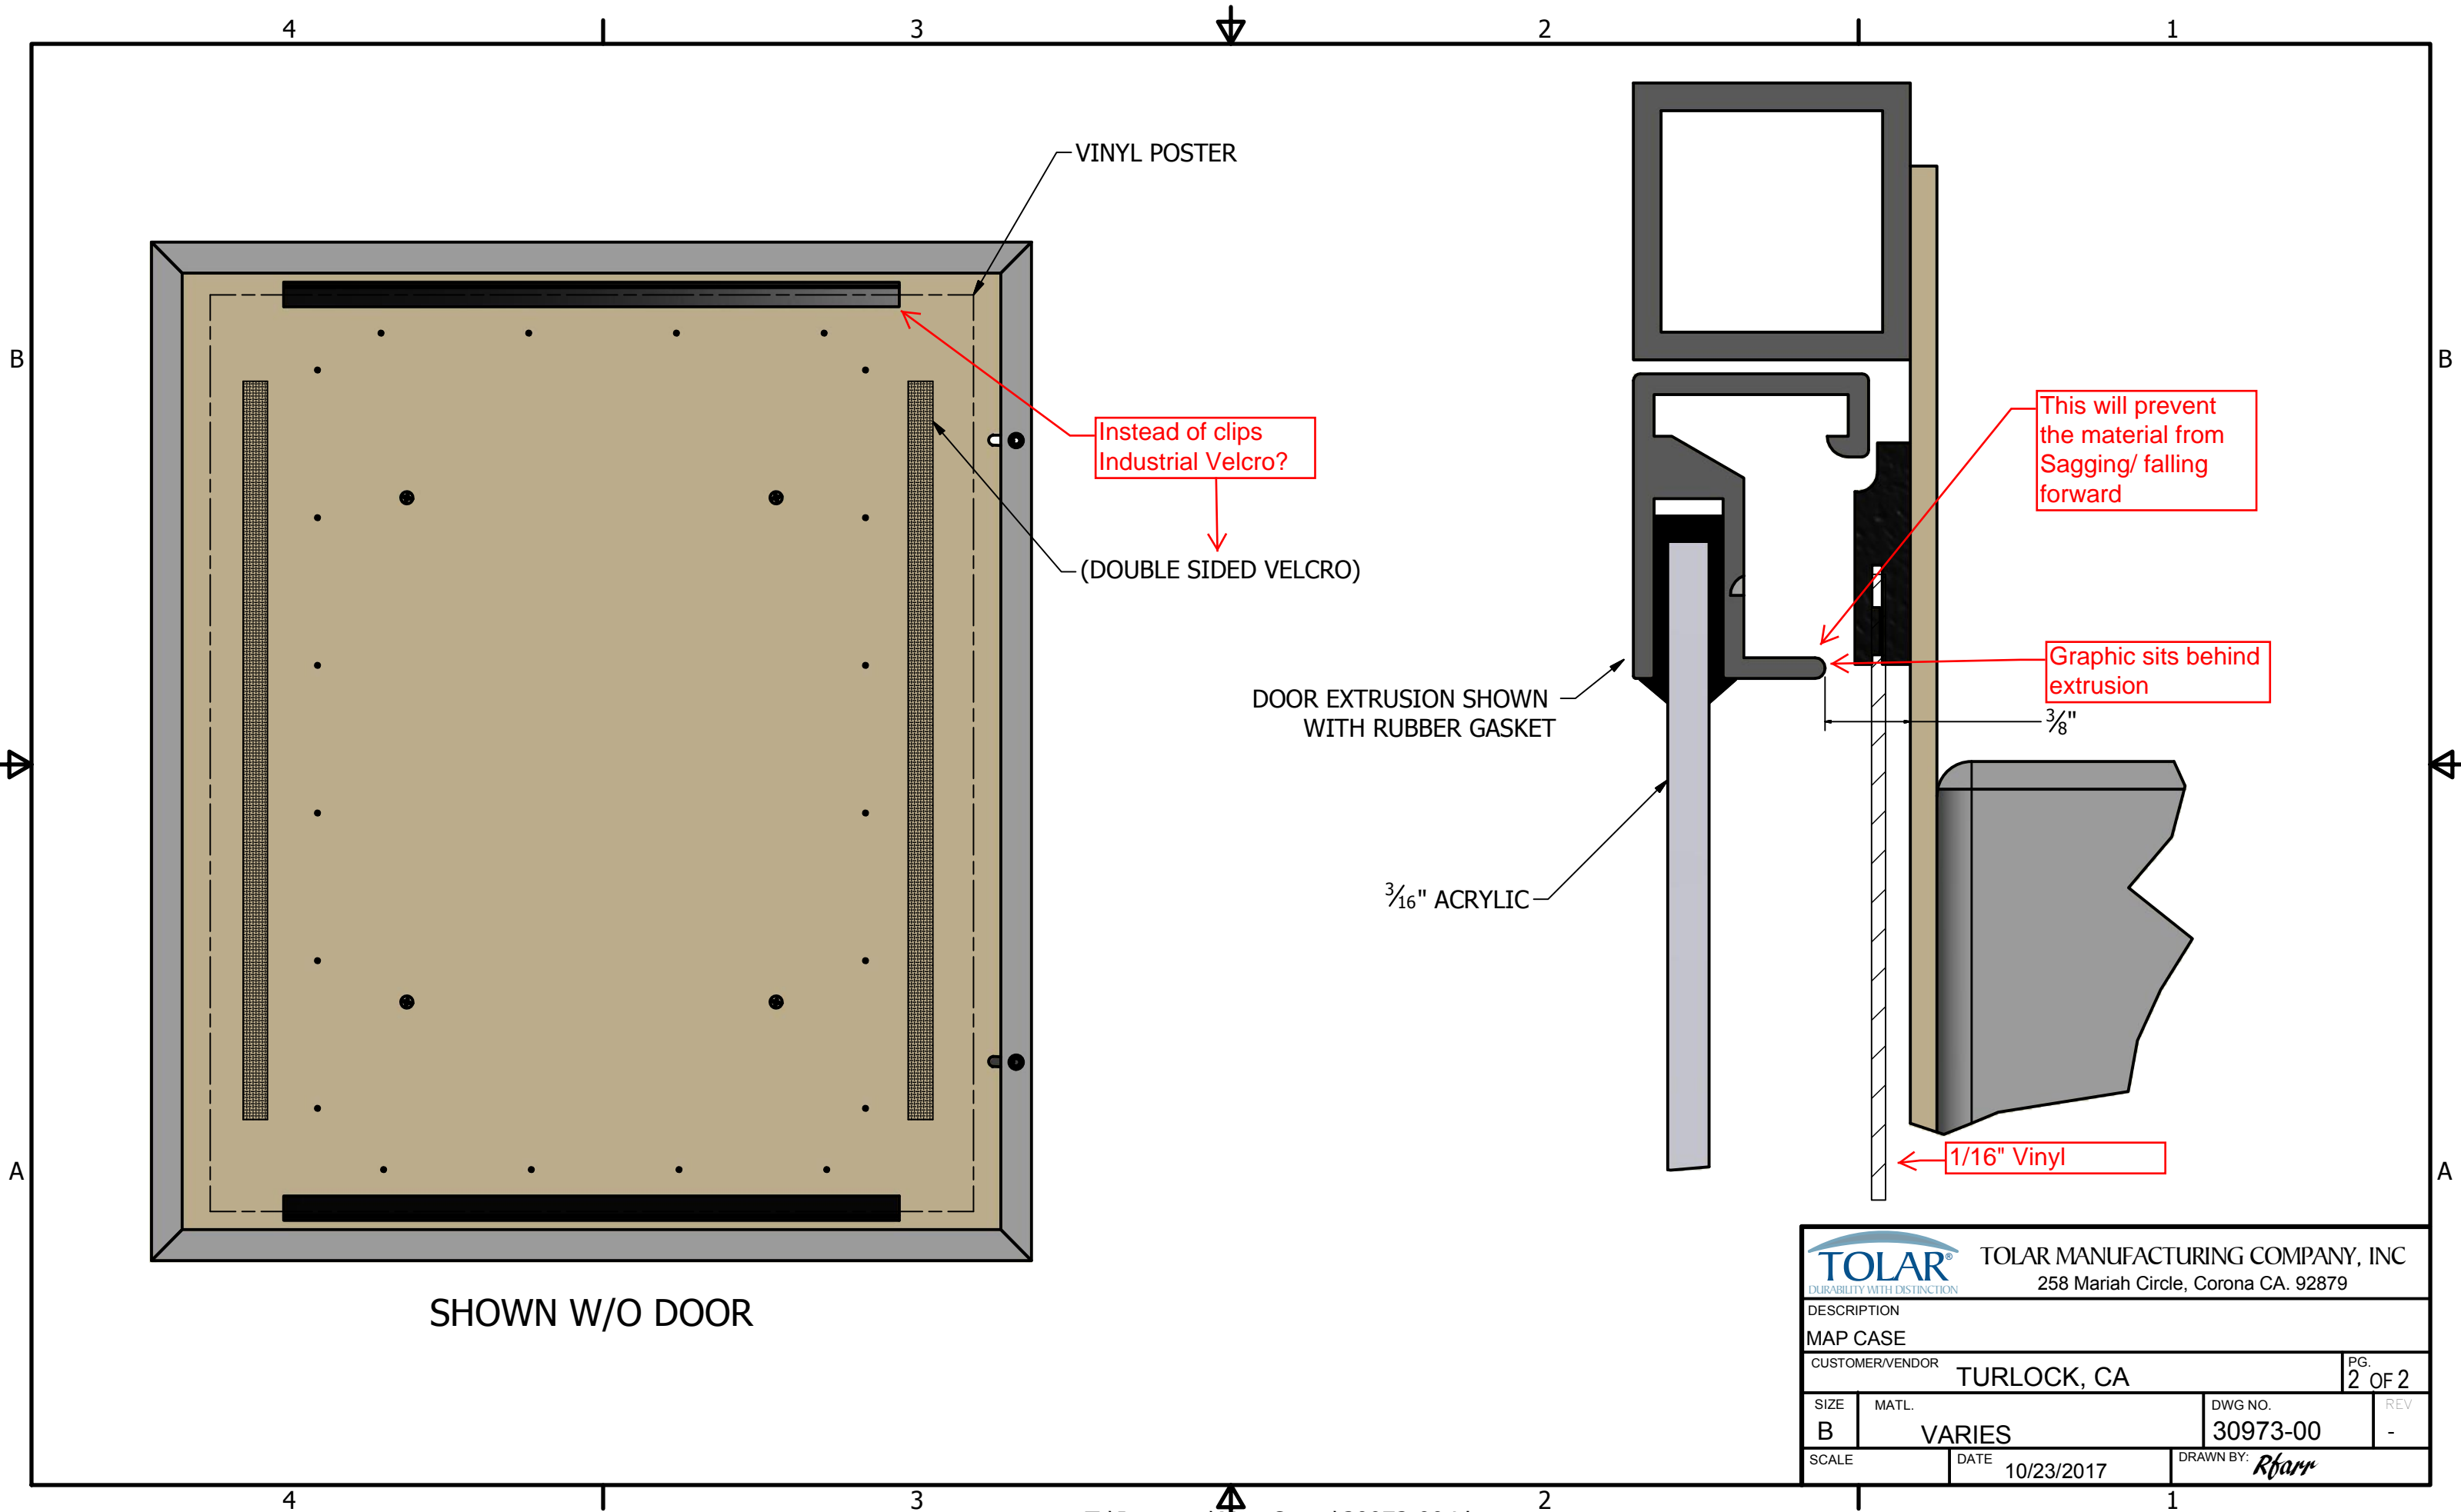

PARTS LIST

ITEM	QTY	PART NUMBER	DESCRIPTION
1	1	30975-00	MAP CASE FRAME WELD.
11	1	30984-00	MAP CASE DOOR FRAME ASSY.
2	2	13616-00-36.75P	HINGE 36.75P, HIDDEN HINGE EXTRUSION
3	2	1014500-25	MAGNETIC POSTER CLIP
4	4	8155036	HEX NUT, 1/4-20 STN. STL.
5	4	8684053	1/4" FLAT WASHER STN. STL.
6	4	8703049	1/4" LOCK WASHER SS, SPRING LOCK
7	1	28637-00	MAP CASE BACK FRAME WELDMENT
8	20	8352031	POP RIVET 1/8" X .25 -.31, SSD45SSBS STN. STL.
9	4	8433225	MACHINE SCREW, 1/4"-20 X 2 1/4", PAN HD, PHILLIPS DRIVE, STAINLESS STEEL
10	2	1008601	MINITURE 3/8", CAM LOCK - CIRCULAR KEYWAY, KEYED ALIKE
